SUMMARY

Data Engineer Intern with hands-on experience in building end-to-end ETL/ELT pipelines and processing large-scale datasets using Medallion Architecture. Developed scalable data workflows, transformed raw datasets into analytics-ready formats, and improved pipeline efficiency. Experienced in data engineering practices including data validation, SQL optimization, and cloud-based data processing. Strong understanding of building reliable and efficient data solutions for business insights and reporting.

EXPERIENCE

Data Engineer Intern | REGex Software Services

Jun 2025 – Present | Jaipur, India

- Built ELT pipelines using Python and Snowflake to process daily raw data and reduce manual data handling efforts.
- Implemented Medallion Architecture (Raw → Silver → Gold) for transforming and organizing data into analytics-ready layers.
- Integrated AWS S3 with Snowflake using Snowpipe for loading semi-structured JSON data.
- Developed SQL queries using JOINS, CTEs, Window Functions, and Subqueries for reporting and dashboard requirements in Microsoft Power BI.
- Optimized SQL queries and performed performance tuning to improve execution time and overall data processing efficiency.
- Implemented data validation and pipeline monitoring to ensure accurate and reliable downstream reporting.

PROJECTS

US Domestic Flight Delay Analytics Platform

- Built an end-to-end flight analytics pipeline by ingesting BTS flight data into Amazon Web Services S3 and processing large-scale datasets in Databricks using PySpark DataFrames and Delta Lake within Medallion Architecture workflows.
- Implemented data cleaning, deduplication, filtering, and transformation workflows using PySpark on large-scale flight datasets to create structured Bronze, Silver, and Gold data layers for downstream reporting.
- Developed KPI-based Gold tables in Snowflake for airline performance, delay trends, and cancellation analysis to support business intelligence dashboards and insights.
- Created interactive dashboards in Microsoft Power BI to visualize flight delays, on-time performance, and delay causes for stakeholder reporting.

Snowflake End-to-End Automated Data Pipeline

- Built an automated ELT pipeline using Snowflake, Snowpipe, Streams, and Tasks for real-time JSON data ingestion from Amazon Web Services S3.
- Implemented Bronze → Silver → Gold data layers with SCD Type 2 and hash-based change detection for maintaining historical records.
- Performed data transformation and automation to support reliable and scalable business intelligence workflows.

Online Food Delivery Management System

- Developed an Online Food Delivery Management System using MySQL for managing food ordering and delivery operations.
- Designed a normalized relational database schema to manage customers, restaurants, menu items, orders, and delivery partners while ensuring data integrity.
- Implemented database operations for storing transactional data and generating insights for order and delivery management.

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Certified Data Science Professional

Oracle Corporation

TECHNICAL SKILLS

Cloud & Warehousing: Snowflake, Databricks, AWS (S3, EC2, Redshift, AWS DMS)

Languages: SQL, Python, PySpark

Tools & BI: Microsoft Power BI, Delta Lake, Snowpipe, Snowflake Streams & Tasks

Concepts: Medallion Architecture, SCD Type 2, ELT/ETL, Data Modeling, Data Pipelines, Data Warehousing

Soft Skills: Analytical Thinking, Problem Solving, Attention to Detail, Team Collaboration

EDUCATION

Bachelor of Computer Applications (BCA)

University Commerce College, Jaipur, Rajasthan

Jun 2021 – Apr 2024

Senior Secondary Education

Shri Vidhya Mandir Sen Sec School, Jaipur

May 2020 – Jan 2021
