Summary

Data Engineer skilled in building scalable ELT pipelines and cloud data platforms processing 225,000+ records across multi-source systems. Proficient in **Snowflake**, **PySpark**, **Databricks**, and **AWS** — delivering **Medallion Architecture** workflows and real-time ingestion solutions that reduced processing time by 80% and enabled data-driven business decisions.

Experience

Data Engineer Intern REGex Software Services	Jun 2025 – Present Jaipur, India
- Built ELT pipelines processing 240K+ daily records using Python and Snowflake reducing processing time by 80% - Systematized data ingestion workflows using Snowpipe and Python, eliminating manual file processing and reducing operational effort by 40% - Designed and implemented Medallion Architecture (Bronze → Silver → Gold) on Snowflake, reducing data processing time by 80% and enabling analytics-ready layers across 3 source systems for Power BI reporting. - Developed advanced SQL queries using JOINS, CTEs, Window Functions, and Subqueries to support 5+ executive reporting dashboards. - Optimized SQL queries and performed performance tuning, improving query execution time by 40% and overall data processing efficiency. - Built data quality checks and pipeline monitoring using Python to ensure 99%+ data accuracy for downstream Power BI dashboards	

Projects

US Domestic Flight Delay Analytics Platform	Apr 2026 – May 2026
- Built an end-to-end flight analytics pipeline by ingesting BTS flight data into AWS S3 and processing large-scale datasets in Databricks using PySpark DataFrames and Delta Lake within Medallion Architecture workflows. - Executed data cleaning, deduplication, filtering, and transformation workflows using PySpark on large-scale flight datasets to create structured Bronze, Silver, and Gold data layers for downstream reporting. - Built KPI-based Gold tables in Snowflake for airline performance, delay trends, and cancellation analysis to support business intelligence dashboards and insights. - Created interactive dashboards in Microsoft Power BI to visualize flight delays, on-time performance, and delay causes for stakeholder reporting.	
Snowflake End-to-End Automated Data Pipeline	Jan 2026 – Feb 2026
- Built an automated ELT pipeline using Snowflake, Snowpipe, Streams, and Tasks for real-time JSON data ingestion from Amazon Web Services S3. - Implemented Bronze → Silver → Gold data layers with SCD Type 2 and hash-based change detection for maintaining historical records. - Streamlined pipeline execution using Snowflake Tasks to schedule transformations and ensure real-time data availability for downstream reporting.	
GlobalMart Retail Data Platform — End-to-End Data Engineering Project	May 2026 – Jun 2026
- Built a scheduled multi-source data ingestion pipeline on AWS EC2 to monitor Google Drive and FTP servers every 5 minutes, processing 225,000+ CSV, Parquet, and JSON records into Amazon S3 with deduplication tracking in DynamoDB. - Configured Snowflake Storage Integrations and established 4 Snowpipes with AUTO_INGEST to enable continuous, event-driven ingestion from Amazon S3 into Snowflake without manual intervention. - Developed Bronze–Silver–Gold Medallion Architecture pipelines using Streams, Tasks, MERGE operations, and LATERAL FLATTEN to process nested IoT JSON data and automate CDC workflows. - Designed analytical data marts and business-ready datasets using CTEs, Window Functions, Materialized Views, and multi-source joins across POS, ERP, and IoT systems. - Delivered Power BI dashboards connected to Snowflake, analyzing 1.17B revenue, 120K transactions, 75.18% gross profit margin, and Q3–Q4 performance trends across 10 retail stores.	

Certifications

Oracle Cloud Infrastructure 2025 Certified Data Science Professional	Oracle Corporation - 2025
---	---------------------------

Technical Skills

Cloud & Warehousing: Snowflake, Databricks, AWS (S3, EC2, Redshift, DynamoDB, AWS DMS), Azure (ADF, Azure Blob Storage)
Languages: SQL, Python, PySpark
Tools & BI: Microsoft Power BI, Delta Lake, Snowpipe, Snowflake Streams & Tasks, Git, GitHub
Concepts: Medallion Architecture, SCD Type 2, ETL/ELT, CDC Pipelines, Data Modeling, Data Pipelines, Data Warehousing
Soft Skills: Analytical Thinking, Problem Solving, Attention to Detail, Team Collaboration

Education

Bachelor of Computer Applications (BCA) University Commerce College, Jaipur, Rajasthan	Jun 2021 – Apr 2024
Senior Secondary Education Shri Vidhya Mandir Sen Sec School, Jaipur	May 2020 – Jan 2021
